Fresh Fish Availability Chart

Here are the color codes for the **Fresh Seafood Availability Chart**: **green** areas show peak availability, **light green** show limited availability, **gray** indicates not available fresh but may be available frozen. There are a number of reasons why a fish may have limited availability.

- it is the beginning or end of the commercial fishing season for that fish
- the fish has strict quotas set and once the quota is met the fishing stops
- the fish is a "by-catch", meaning that it has limited commercial value and is a by-catch while fishing for something else
- there isn't much commercial/consumer interest in the fish so fishermen don't consistently fish for it
